

## **Disclaimer**

This article discusses a range of issues related to government actions, pharmaceutical practices, and public health measures during the 2019-2022 crisis. It combines verifiable facts with subjective interpretations and speculative elements. The following points clarify these distinctions to provide context and transparency for the reader.

## **Factual Information**

1. **Government Monopolies on Gambling and Marijuana:**
  - The Canadian government, through provincial authorities, regulates and operates gambling activities.
  - The legalization of marijuana in Canada involved significant government regulation and participation in the legal market.
2. **Pharmaceutical Industry Practices:**
  - Pharmaceutical companies aim to maximize profits and have faced numerous lawsuits.
  - High pricing of life-saving drugs, often exceeding production costs, is a documented issue.
3. **COVID-19 Vaccine Efficacy and Side Effects:**
  - Initial claims portrayed COVID-19 vaccines as highly effective.
  - Over time, it was acknowledged that vaccines are more effective at reducing severe illness and death than at preventing transmission.
  - Common side effects such as muscle pain, headaches, and swelling are documented. Serious side effects, though rare, have been reported.
4. **Vaccine Mandates and Civil Liberties:**
  - Various governments, including Canada's, implemented mandates requiring proof of vaccination for access to certain activities and venues.
  - Some legal arguments and lawsuits have challenged these mandates based on the Canadian Charter of Rights and Freedoms.

## **Speculative Elements**

1. **Financial Interests of Politicians:**
  - While it is plausible that some politicians might have financial interests in pharmaceutical companies, specific instances need verification.
2. **Gene Editing and Biodigitalism:**
  - Discussions about gene editing technologies and biodigitalism by the WEF and other entities are speculative and represent future-oriented thinking rather than current policy or practice.
3. **Impact of COVID-19 Vaccines on Virus Mutation and Long-term Effects:**
  - Claims about vaccines causing virus mutations or having unknown long-term effects are speculative and require further scientific investigation.
